Bug Fixes 2

Bug Fixes

Ticket	Description
27439	The Customer Interface does not support submission of form variable SERVICE_autocredit during service updates.
27448	The payments page does not work correctly for an account that has an apostrophe in the last name.
27449	cgitools parsing of cookies exceeds buffer for the value of "HTTP_COOKIE". This results in bad data being placed into the environment for bmuid.
27451	BillMax does not submit refunds to Authorize.Net during nightly processing.
27459	Generating a credit may generate a "startdate greater than enddate" on FreeBSD OS's.
27462	report_datacall prints negative values for totals when those totals exceed whats possible for C language integers (ints). Also report_datacall does not handle gigabytesin/out if they are present.
27463	send_statements incorrectly lists previously processed statements if processing a large number of statements.
27466	Email addresses for accounts and users that are created from a service have the company domain appended even if the service already has a domain specified.
27474	When modifying a list definition, the value stored for indicating uniqueness is always set to NO.
27480	When issuing a credit during a ServiceChange, nightly processing might not complete successfully and run for a long period of time before failure.
27481	Under certain circumstances, BillMax_ComputeNextUsageDate causes closeofday to not complete.
27482	On FreeBSD OS's, radiusd does not enter values into the stats table after the first value is entered.
